SERVICE MANUAL
MANUEL D'ENTRETIEN
WARTUNGSHANDBUCH

CAUTION:
Before servicing this chassis, it is important that the service technician read the “Safety Precautions” and “Product Safety Notices” in this service manual.

ATTENTION:
Avant d’effectuer l’entretien du châassis, le technicien doit lire les «Précautions de sécurité» et les «Notices de sécurité du produit» présentés dans le présent manuel.

VORSICHT:
Vor Öffnen des Gehäuses hat der Service-Ingenieur die „Sicherheitshinweise“ und „Hinweise zur Produktsicherheit“ in diesem Wartungshandbuch zu lesen.

Data contained within this Service manual is subject to alteration for improvement.

Les données fournies dans le présent manuel d’entretien peuvent faire l’objet de modifications en vue de perfectionner le produit.

Die in diesem Wartungshandbuch enthaltenen Spezifikationen können sich zwecks Verbesserungen ändern.

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

Plasma Television

June 2005

CAUTION FOR SAFETY

Please read this page before repair the monitor.
This page explains to following items for keep the safety of set and prevent to accident during repair work.

● **We explain by symbol at happen the damage or injury when took wrong repair.**

⚠ **Warning**	This symbol means **"possible to die or heavy damage"**
⚠ **Caution**	This symbol means **"possible to damage or something will break"**

● **We made the symbol as below, which are kind of following items.**

⚠	This symbol means **"CAUTION"**
⚠	This symbol means **"POSSIBLE to ELECTRIC SHOCK"**

❗	This symbol means **"MUST"**
⃠	This symbol means **"DO NOT"**

⚠ WARNING

■ **Should be follows to instructions.**

⚠

We indicates to cabinet, chassis and parts by label, which are special attention part.
Please follow to note and [Safety Instructions] of User's Manual.

■ **Prevent the electric shock.**

⚠

Please take care during working because monitor has high voltage part and power supply part.
Possible to die if you touch to these place by miss take.
Please disconnect power plug during overhaul, reassemble or change parts.
You will die or take damage by electric shock if you touch to live part.

■ **Use recommended components.**

❗

Please use to same characteristic component, which is same as previous for your safety and keep reliability especially marked by ⚠ in parts list and circuit diagram.
It is reason of electric shock or fire if you use non-recommended component.

■ **Should be kept same style of wiring or component.**

❗

Monitor uses tubes or tapes, which made by insulator, and some components are keep distance from surface of PWB for safety.
Internal leads kept from hot part or high voltage part by clamper or styling, so please return to original condition for prevent to electric shock or fire.

■ **Should be done safety check after finished.**

❗

Every part (removed screws, component and wiring) should be returned to previous condition.
Check around repair position for make damage by miss take and measure the insulated impedance by meg-ohm meter.
Confirm the value of impedance, that value is more than 4M ohm.
It is reason for electric shock or fire if that value is less than 4M ohm.

■ **Nobody can check and repair to the code and combination circuit of HDCP.**

⃠

Never remove the shield case, which is assembled to the code and combination circuit of HDCP.

PRECAUTIONS

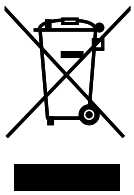
How to clean the plasma screen panel of the monitor

Before cleaning the monitor, turn off the monitor and disconnect the power plug from the power outlet.
To prevent scratching or damaging the plasma screen face, do not knock or rub the surface with sharp or hard objects. Clean the screen with a soft cloth moistened with warm water and dry with a soft cloth. If it is not enough, then use a cloth with mild detergent. Do not use harsh or abrasive cleaners.

How to clean the cabinet of the monitor

Use a soft cloth to clean the cabinet and control panel of the monitor. When excessively soiled dilute a neutral detergent in water, wet and wring out the soft cloth and afterward wipe with a dry soft cloth.
Never use acid/alkaline detergent, alcoholic detergent, abrasive cleaner, powder soap, OA cleaner, car wax, glass cleaner, etc. especially because they would cause discoloration, scratches or cracks.

Information for users applicable in European Union countries



This symbol on the product or on its packaging means that your electrical and electronic equipment should be disposed at the end of life separately from your household wastes. There are separate collection systems for recycling in EU. For more information, please contact the local authority or the dealer where you purchased the product.

1. Features

Large-screen, high-definition plasma display panel

The 42-inch color plasma display panel, with a resolution of 1024 (H) x 1024 (V) pixels, creates a high-definition, large-screen(aspect ratio : 16:9) and low-profile flat display. Free from electromagnetic interferences from geomagnetic sources and ambient power lines, the panel produces high-quality display images free from color misconvergence and display distortion.

High Performance Digital Processor

A wide range of input signals can be handed,including composite, component,and HDMI.High Definition Digital Processor creates the fine-textured image with dynamic contrast. In addition, it corresponds to a broad array of personal computer signals, from 640 x 400 and 640 x 480 VGA to 1600 x 1200 UXGA.(Analog Input)

Easy-to-use remote control and on screen display system

The remote control included eases the work of setting display controls. Further, the on-screen display system, displays the status of signal reception and display control settings in an easy-to-view fashion.

Connecting to an Audio Visual Device

• Two Scart terminals[*1], composite/S terminal[*2], a component terminal[*3], and a HDMI terminal have been added.
A composite video output terminal is also provided as a monitoring output.

[*1] AV1 scart applies to composite/ S-video
AV2 applies to composite/ RGB

[*2] A composite/S terminal = Side Input

[*3] With AV3 input, if a composite terminal and a component terminal are used at the same time, the component terminal would govern.

• A wide range of devices can be also connected besides personal computers.

Power Swivel Feature

It allows turning the plasma display left or right within ±30 degree using the remote control.

Digital Terrestrial Television Broadcasting
Converting into digital signal enables to provide more channels and various useful features, such as Electric Programme Guide, Digital Teletext, and so on. Further, digital signal can create high quality picture.

This logo indicates that the product is compliant with European Digital Broadcasting.
DVB is a registered trademark of the DVB Project.

This logo indicates that the product is set up to view digital terrestrial TV.
FREEVIEW and the FREEVIEW logo are trade marks of DVT Services Ltd and are used under license. FREEVIEW Logo © DTV Services Ltd 2002.

This logo indicates that the product will work after implementation of full digital switchover.
The Digital logo is a Certification Mark.

2. Specifications

Panel	Display dimensions	Approx. 42 inches (922 (H) x 522 (V) mm, diagonal 1059mm)
	Resolution	1024(H) x 1024 (V) pixels
Net dimensions (excluding Speakers/Stand)		1050 (W) x 676 (H) x 128 (D) mm
Net weight (excluding Speakers/Stand)		38.0kg
Ambient conditions	Temperature	Operating : 5˚C to 35˚C, Storage : 0˚C to 40˚C
	Relative humidity	Operating : 20% to 80%, Storage : 20% to 90% (non-condensing)
Power supply		AC220 - 240V, 50Hz
Power consumption/at standby		380W / <3W
Audio output		speaker 12W + 12W (6Ω),
(RGB input)		
Input terminals		RGB1 DVI input terminal (DVI-D) RGB1 audio input terminal (3.5mm Stereo Mini Jack) RGB2 analogue RGB input terminal (D-sub 15-pin) RGB2 audio input terminal (3.5mm Stereo Mini Jack)
Input signals		0.7 V/1.0 Vp-p, analogue RGB (Recommended Signal) 480i, 576i, 480p, 576p, 1080i/50, 1080i/60, 720p/50*1, 720p/60
Sync signals		H/V separate, TTL level [2KΩ] H/V composite, TTL level [2KΩ] Sync on green, 0.3 Vp-p [75Ω]
Recommended signal		44 modes
(Video input)		
Input terminals		AV1: composite video /S video / L/R audio input terminal (SCART) AV2: composite video /RGB / L/R audio input terminal (SCART) AV3: composite video / Y/P_B /P_R video / L/R audio input terminal (RCA) AV4: composite video /S video / L/R audio input terminal (RCA) AV5: HDMI input terminal
Input signals		AV1: PAL, SECAM, NTSC3.58, NTSC4.43 AV2: PAL, SECAM, NTSC3.58, NTSC4.43, RGB AV3: PAL, SECAM, NTSC3.58, NTSC4.43 AV3: 480i, 576i, 480p, 576p, 720p/50, 720p/60, 1080i/50, 1080i/60, AV4: PAL, SECAM, NTSC3.58, NTSC4.43 AV5: HDMI input signal
Output Signal		OUTPUT (MONITOR): composite video monitor-output terminal (RCA) OUTPUT (MONITOR): L/R audio monitor- output terminal (RCA) OUTPUT (HEADPHONE): L/R audio monitor- output terminal (Mini-pin) AV1: composite video / L/R audio monitor /DTT/TV output terminal (SCART)
Recommended signal		24 modes
(RF input)		
Input terminals		ANT : 75Ω Unbalanced
RF Video System		PAL B, G, H / I / D, K SECAM B, G / K1 / L, L' / (D, K)*2 DVB-T

• The monitor takes at least 30 minutes to attain the status of optimal picture quality.
*1 720p/50 does not support RGB2.
*2 The SECAM D, K system might not be normally received, depending on the model.

Applicable video signals for each input terminal

Applicable video signals for input terminal

Terminal	RCA/S-video/SCART				HDMI	DVI		D-sub	
Signal	CVBS	S-video	Component	SCART (RGB)		PC	STB	RGB	Component
AV1	○	○							
AV2	○			○					
AV3	○		○						
AV4	○	○							
AV5					○				
RGB1						○	○		
RGB2								○	○

3. Service points

● Lead free solder

This product uses lead free solder (unleaded) to help preserve the environment. Please read these instructions before attempting any soldering work.

Caution: Always wear safety glasses to prevent fumes or molten solder from getting into the eyes. Lead free solder can splatter at high temperatures (600˚C).

■ Lead free solder indicator

Printed circuit boards using lead free solder are engraved with an "F."

■ Properties of lead free solder

The melting point of lead free solder is 40-50˚C higher than leaded solder.

■ Servicing solder

Solder with an alloy composition of Sn-3.0Ag-0.5Cu or Sn-0.7Cu is recommended.
Although servicing with leaded solder is possible, there are a few precautions that have to be taken. (Not taking these precautions may cause the solder to not harden properly, and lead to consequent malfunctions.)

Precautions when using leaded solder

- Remove all lead free solder from soldered joints when replacing components.
- If leaded solder should be added to existing lead free joints, mix in the leaded solder thoroughly after the lead free solder has been completely melted (do not apply the soldering iron without solder).

■ Servicing soldering iron

A soldering iron with a temperature setting capability (temperature control function) is recommended.
The melting point of lead free solder is higher than leaded solder. Use a soldering iron that maintains a high stable temperature (large heat capacity), and that allows temperature adjustment according to the part being serviced, to avoid poor servicing performance.

Recommended soldering iron:

- Soldering iron with temperature control function (temperature range: 320-450˚C)

Recommended temperature range per part:

Part	Soldering iron temperature
Mounting (chips) on mounted PCB	320˚C±30˚C
Mounting (chips) on empty PCB	380˚C±30˚C
Chassis, metallic shield, etc.	420˚C±30˚C

The PWB assembly which has used lead free solder

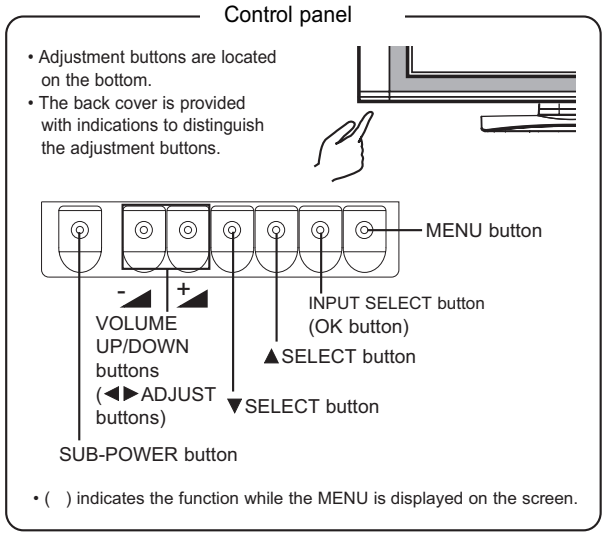
FILTER PWB, SW PWB, LED/RECEIVER PWB, SP TERMINAL(L/R) PWB
AUDIO PWB, JOINT PWB, Swievel PWB, HDMI PWB, control PWB
VIDEO PWB, I/F A PWB, I/F B PWB, DTT PWB
TUNER PWB

■ Readjustment Power supply voltage

When a PANEL or a Power Unit is exchanged, power supply voltage needs to be adjusted. Please adjust to make the values of Va and Vs of as should on the label currently stuck on the panel back upper parts.Adjustment is performed by VR in the power supply unit. Please refer to the procedures of “Va” and “Vs” adjustments on 22page.

4. Component names

[Main unit]



Control panel
• Adjustment buttons are located on the bottom.
• The back cover is provided with indications to distinguish the adjustment buttons.

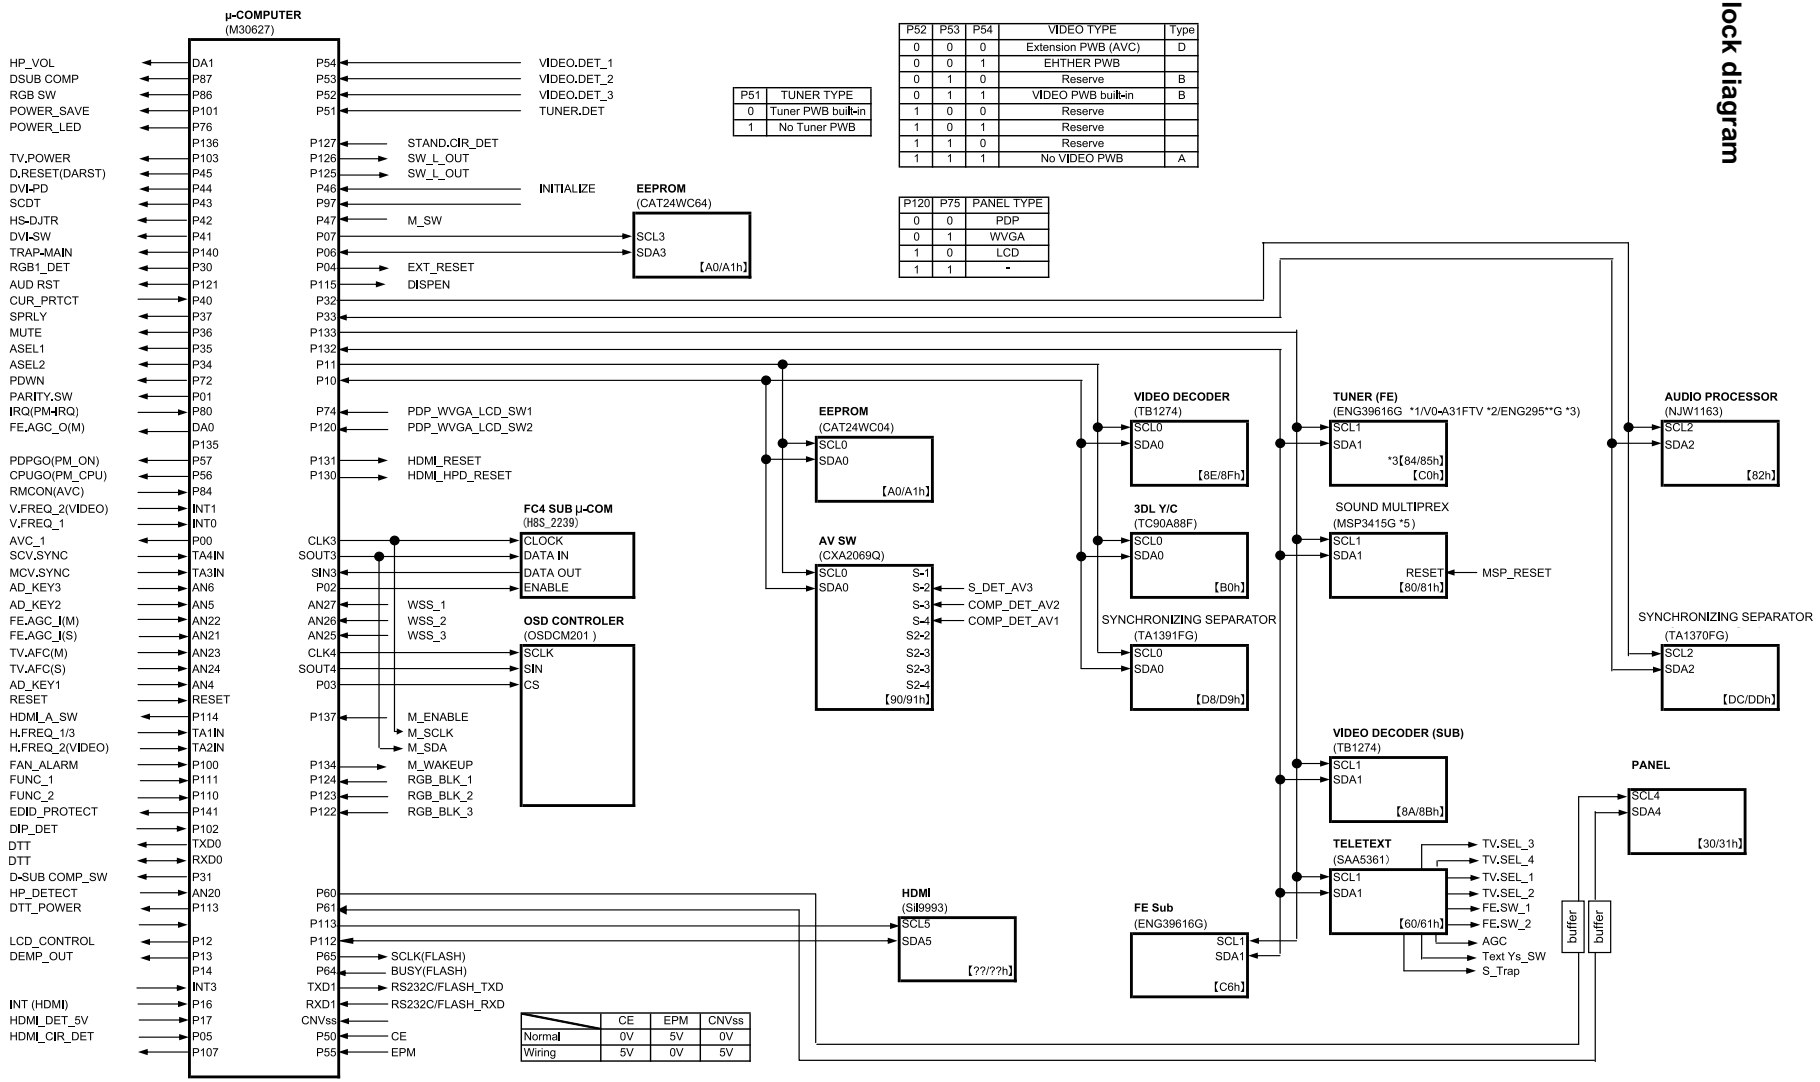
● Block diagram



6. Adjustment

● How to get to Adjustment mode

Using the front control buttons with the set turned off (standby) can activate it.

Press the SUB-POWER(⏻) button, INPUT SELECT(⏎) button and ▼ button at the same time, and hold for more than 5 seconds.

The set turns on in adjustment mode with OSD.

● Changing data and Selecting Adjustment code

When the set is in adjustment mode, the cursor ◄ , ► , ▲ , ▼ and OK buttons of the remote control or front panel may be used as the adjustment keys.

▲ , ▼ buttons are used for selecting adjustment code.

◄ , ► buttons are used for changing data values.

OK button is used for confirming the data.

After finishing the necessary adjustment press MENU button. Adjustment mode is released and the set returns to normal condition.

● Memory Initialize operation

NOTE: The execution of this function returns the adjustment codes to the preset values, therefore, adjustment data will be lost.

Procedure

(1) Enter Adjustment Mode.

(2) Select MEMORY INIT adjustment code (No.658) and change the data value from 0 to 1.

(3) Activate MEMORY INIT by pressing OK button for more than 3 seconds.

(4) Select No.525 and change data value from 1 to 0.

(5) Check that the receiving channel goes to P1. Unit is set to preset values.

● Service adjustment items by I^2C-bus control (MAIN Part)

O : shoule be adjusted
Δ should be followed previous data

● Factory Reset

After all of the adjustments of main chassis are finished, perform FACTORY RESET.

Press the SUB-POWER(⏻) button, INPUT SELECT(⏎) button and ▲ button at the same time, and hold for more than 5 seconds.

The unit is set to factory settings.

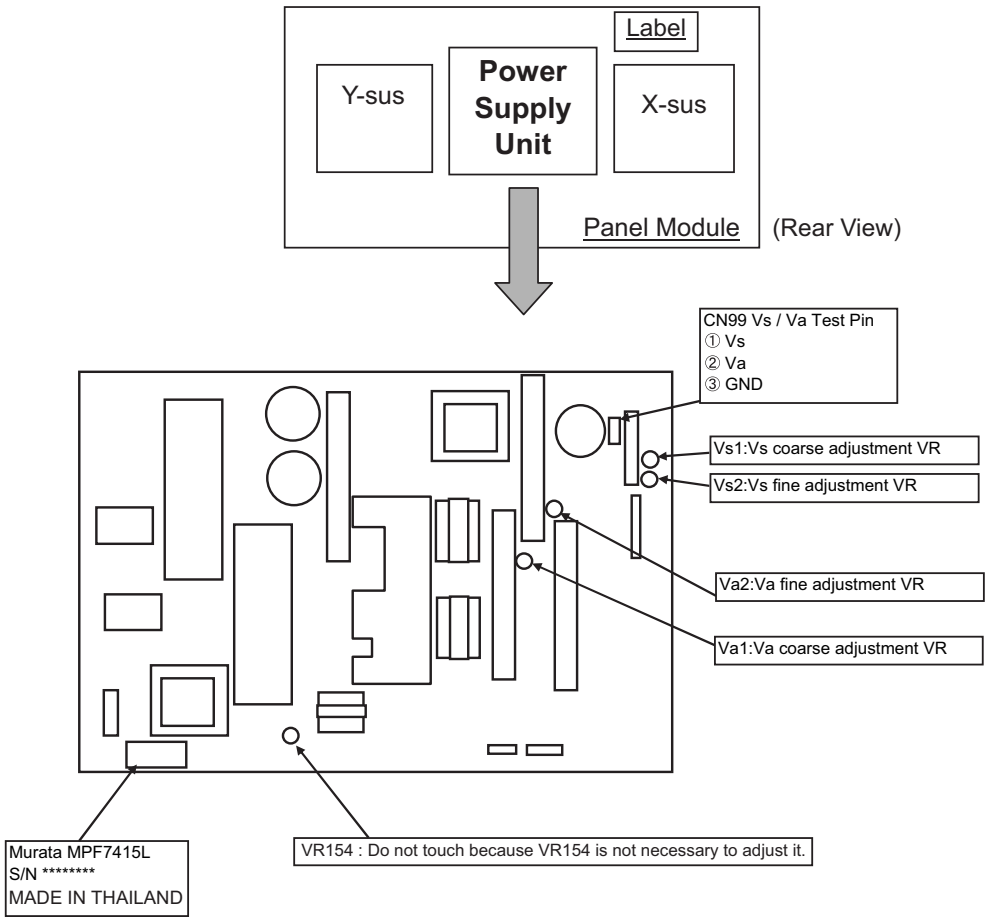
Applicable Model	All models

Preparation		Procedure	
(1)	Turn on the set and perform pre-heat run more than 1 min on burn-in screen.	(1)	Turn Vs ADJ to adjust Vs voltage to be within ±0.1V of the value specified in the label on the panel. ① Adjust within ± 1V at Vs1 ② Adjust within ± 0.1V at Vs2
(2)	Receive full back pattern signal (or Video silence signal; but it will be automatically turned off after a few seconds by power save function.)	(2)	Turn Va ADJ to adjust Va voltage to be within ±0.2V of the value specified in the label on the panel. ① Adjust within ± 1V at Va1 ② Adjust within ± 0.2V at Va2
(3)	Connect voltmeter leads to Vs (or Va) and GND test points of the power unit.	(3)	Reconfirm that Vs voltage remains within ±0.1V of the specified value. Readjust if it's outside of the margin.
			Label example <LOT>N6 Vs= 80.0V Va=60.0V Vw=140.0V Vx=60.0V



Item	RGB Amplitude Adjustment (PC D-Sub input)
Applicable Model	All models

Preparation		Procedure	
(1)	Input RGB amplitude adjustment signal of VGA (60Hz) into RGB2 [D-sub] terminal. 	(1)	Receive PC signal (VGA [60Hz]), and indicate Service Adjustment Menu.(Main)
		(2)	Select No.652 of Service Adjustment Menu. Press [OK] key more than 2 seconds to start the automatic adjustment. The adjustment completes when the OSD reappears.

[Note] Never adjust without use of the specified signal.
If that were done by mistake, the picture would become abnormal in black level, contrast and color.
In this case, it will be recovered by re-adjustment in the specified way.

Item	RGB Amplitude Adjustment (Main/Sub)
Applicable Model	All models

Preparation		Procedure	
(1)	Input 576p or 480p adjustment signal into AV3 terminal. 	(1)	Receive 576p or 480p adjustment signal on AV3 terminal input. Indicate Service Adjustment Menu.
		(2)	Select No.652 (RGB amplitude gain adjustment Main) of Service Adjustment Menu. Press [OK] key more than 2 seconds to start the automatic adjustment. The adjustment completes when the indication [Auto Mode] at the bottom of the screen disappears.
		(3)	Select No.653 (RGB amplitude gain adjustment Sub) of Service Adjustment Menu. Press [OK] key more than 2 seconds to start the automatic adjustment. The adjustment completes when the indication [Auto Mode] at the bottom of the screen disappears.

[Note] Never adjust without use of the specified signal.
If that were done by mistake, the picture would become abnormal in black level, contrast and color.
In this case, it will be recovered by re-adjustment in the specified way.

Item	Video Color Temperature Adjustment (Cool)
Applicable Model	All models

Adjustment Preparations		Adjustment Procedures	
(1)	Set the signal generator output as All White.	(1)	Perform the following adjustment with the remote control
(2)	Component signal (480i) Video level : 0.700Vp-p Sync level : 0.300Vp-p Setup level : 0V	(2)	Set the CRT color analyzer (CA100) at the center of the panel.
(3)	Picture Menu is set as [RESET].	(3)	Ensure that the service adjustment menu (sub menu) No. 0, 1, 2, are all set as 255.
(4)	Confirm that the mode is set as Factory Adjustment mode.	(4)	After receiving the video signal, step down the two (or one) among adjustment No. 0, 1, 2 and adjust the values as shown below. Note) At least one of the data shoud be 255. Specification Video color temperature (Cool) x=0.258±0.005 y=0.273±0.005

Item	Video Color Temperature Adjustment (Normal)
Applicable Model	All models

Preparation		Procedure	
(1)	Set signal generator output as All White (Window ratio: 100%).	(1)	Perform the following adjustment with the remote control.
(2)	Component signal (480i) Video level : 0.700Vp-p Sync level : 0.300Vp-p Setup level : 0V	(2)	Set the CRT Color Analyzer (CA-100) at the center of the panel.
(3)	Check that Picture Menu is set as [RESET] mode.	(3)	Ensure that service adjustment menu (sub) No. 3, 4, 5 are all set as 255.
(4)	Set into Factory Adjustment mode.	(4)	After receiving the video signal, step down the two (or one) among adjustment No. 3, 4, 5 and adjust the values as shown below. (Note) At least one of the data should be 255. <Specification> Video color Color temperature (Normal) x=0.285±0.005 y=0.293±0.005

Item	Video Color Temperature Adjustment (Warm)
Applicable Model	All models

Preparation		Procedure	
(1)	Set signal generator output as All White (Window ratio: 100%).	(1)	Perform the following adjustment with the remote control.
(2)	Component signal (480i) Video level : 0.700Vp-p Sync level : 0.300Vp-p Setup level : 0V	(2)	Set the CRT Color Analyzer (CA100) at the center of the panel.
(3)	Check that Picture Menu is set as [RESET] mode.	(3)	Ensure that service adjustment menu (submenu) No. 6, 7, 8 are all set as 255.
(4)	Set into Factory Adjustment mode.	(4)	After receiving the video signal, step down the two (or one) among adjustment No. 6, 7, 8 and adjust the values as shown below. (Note) At least one of the data should be 255. <Specification> Video color Color temperature (Warm) x=0.314±0.005 y=0.327±0.005

Item	Video Color Temperature Adjustment
Applicable Model	All models

Preparation		Procedure	
(1)	Set signal generator output as All White (Window ratio: 100%).	(1)	Perform the following adjustment with the remote control.
(2)	Component signal (480i) Video level : 0.700Vp-p Sync level : 0.300Vp-p Setup level : 0V	(2)	Set the CRT Color Analyzer (CA-100) at the center of the panel.
(3)	Check that Picture Menu is set as [RESET] mode.	(3)	Ensure that service adjustment menu (sub menu) No. 9, 10, 11 are all set as 255.
(4)	Set into Factory Adjustment mode.	(4)	After receiving the video signal, step down the two (or one) among adjustment No. 9, 10, 11 and adjust the values as shown below. (Note) At least one of the data should be 255. <Specification> Video color Color temperature (B&W) x=0.335±0.005 y=0.343±0.005

Item	PC Color Temperature Adjustment
Applicable Model	All models

Preparations		Procedures	
(1)	Perform after the video color temperature adjustment.	(1)	Perform the following adjustment with the remote control
(2)	Set into Factory Adjustmentmode.	(2)	Write the results of the video color temp.adjustment (Dynamic/Normal/Warm/B&W) No. 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23 data into Adjustment No. 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11 data. * at service Adjustment sub menu. Ex.) Video adjustment → PC adjustment No.0 data → No.12 data No.1 data → No.13 data No.2 data → No.14 data ⋮ ⋮

7. Troubleshooting

● How to get to Burn-in mode

This mode displays the test patterns of some single color raster in turn. These signals are from built-in generator of PDP panel. So it can be presumed that maybe the panel has some trouble when the screen of Burn-in mode is abnormal.

Using the front control buttons with the set turned off (standby) can activate this mode.

Press the SUB-POWER(⏻) button, INPUT SELECT(⏎) button and VOLUME DOWN(🔉) button at the same time, and hold for more than 5 seconds.

The set turns on with single color raster and the OSD of [BURN IN: ON].

To escape from this mode, press the SUB-POWER(⏻) button, INPUT SELECT(⏎) button and ▲ button at the same time, and hold for more than 5 seconds. Burn-in mode will be released.

● How to recover the remote and front key function

If remote and front key cannot operate after miss set special function by front keys, these functions can recover by below method.

Press the SUB-POWER(⏻) button, INPUT SELECT(⏎) button and ▼ button at the same time, and hold for more than 5 seconds.

The set turns on the service menu mode.

Select No.535 and data set from [0] to [1], and select No.536 and data set from (0) to (1).

Or

Press the SUB-POWER(⏻) button and 🔊 button at the same time, and hold for more than 5 seconds

● How to check method of the use accumulation time for panel.

Select No.518 of Service Adjustment Menu.

8. Self-Diagnosis Function

This chassis has 2 modes of self-diagnosis function.

(1) PDP panel check mode: It indicates the one latest record of the PDP panel failure with blinking of the power indication light (LED).

(2) Signal circuit check mode: It indicates the check result on some points of the signal circuit and the history of them with On-Screen Display (OSD).

● PDP panel self-diagnosis function

This function is for a PDP panel failure with no picture.

To enter to this Self-Diagnosis mode, follow the next steps:

Preparation:

1) The Power Cord should be connected to AC line and the Main Power switch should be turned on.

2) Turn the power off by the SUB-POWER(⏻) button of the monitor or the remote control.

Procedure:

1) Press the SUB-POWER(⏻) button and ▼ button on the bottom of the monitor at the same time, and keep it for more than 5 seconds after the power turned on.

2) It generates red blinking series of the power indicator light.

3) Any operation would cancel the Self -Diagnosis mode.

4) The next table shows the PDP PWB in which failure most probably would be allocated according to the number of blinks.

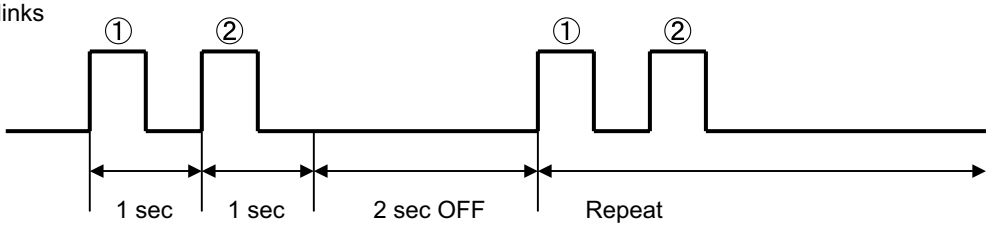
Number of red blinks of power indication light	Presumed failing PWB of PDP panel
1	Logic
2	X-SUS
3	Y-SUS, SDM
4	X-SUS, Y-SUS, SDM, PSU
5	ABUS, ADM, PSU
6	ADM temperature
7	ADM temperature
8	All of above-mentioned PWB's

SDM: Scan Driver Module
PSU: Power Supply Unit
ADM: Address Driver Module

Note) SDM is permanently contacted to glass part

[Blinking condition of power indication light]

Ex. 2 blinks



● Signal circuit self-diagnosis function

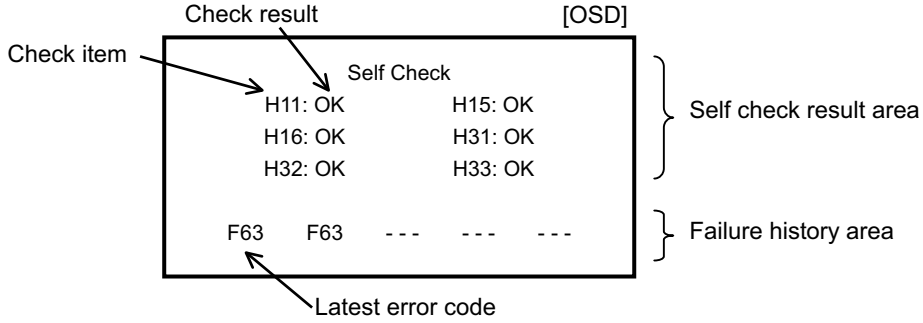
This function is for the failure of the signal circuit, for example the phenomenon as below:
"Sometimes power turns off abnormally." "Sometimes picture disappears abnormally."
To enter to this Self-Diagnosis mode, follow the next steps:

Preparation:

1) The Power Cord should be connected to AC line and the Main Power switch should be turned on.
2) Turn the power off by the SUB-POWER(⏻) button of the monitor or the remote control.

Procedure:

1) Press the SUB-POWER(⏻) button and ▲ button on the bottom of the monitor at the same time, and keep it for more than 5 seconds after the power turned on.
2) The monitor will be turned on, and it will display On-Screen Display of the Self-check result and the failure history as below.
3) Any operation would cancel the Self -Diagnosis mode.
4) The following table shows the OSD symbols and contents of failure PWB in which failure most probably would be allocated according to the number of blinks.



Code	stored up in failure history	Self checking item	Problem	Phenomenon	Cause
C10	–	–	No sync. (Snow noise)	OSD of " ! Check Antenna " appears.	No connection of ANT cable Preset tuning is not yet
H11	–	○	Tuner problem	Cannot receive the main signal from antenna	Communication error of U101
H15	–	○	Composite video SW IC problem	Cannot receive picture and audio Cannot change input mode	Communication error of I201
H16	–	○	Component video SW IC problem	No component picture Cannot change input mode	Communication error of I202
H31	–	○	Color demodulator IC problem	Abnormal color Dark picture	Communication error of I501
H32	–	○	Sync. separator IC problem	Unsynchronized picture	Communication error of I601
H33	–	○	3D Y/C separator IC problem	Abnormal color Dark picture / No picture	Communication error of I302
F63	○	–	I^2C-bus latch problem	Cannot store setting data (Ex. Channel, Volume etc.)	SCL3/SDA3 latched up

If you clear history of failure, make FACTORY RESET: enter the factory setting mode; press the SUB-POWER(⏻) button, INPUT SELECT(⏎) button and ▲ button on the bottom of the monitor at the same time. And keep it for more than 5 seconds after the power turned on.

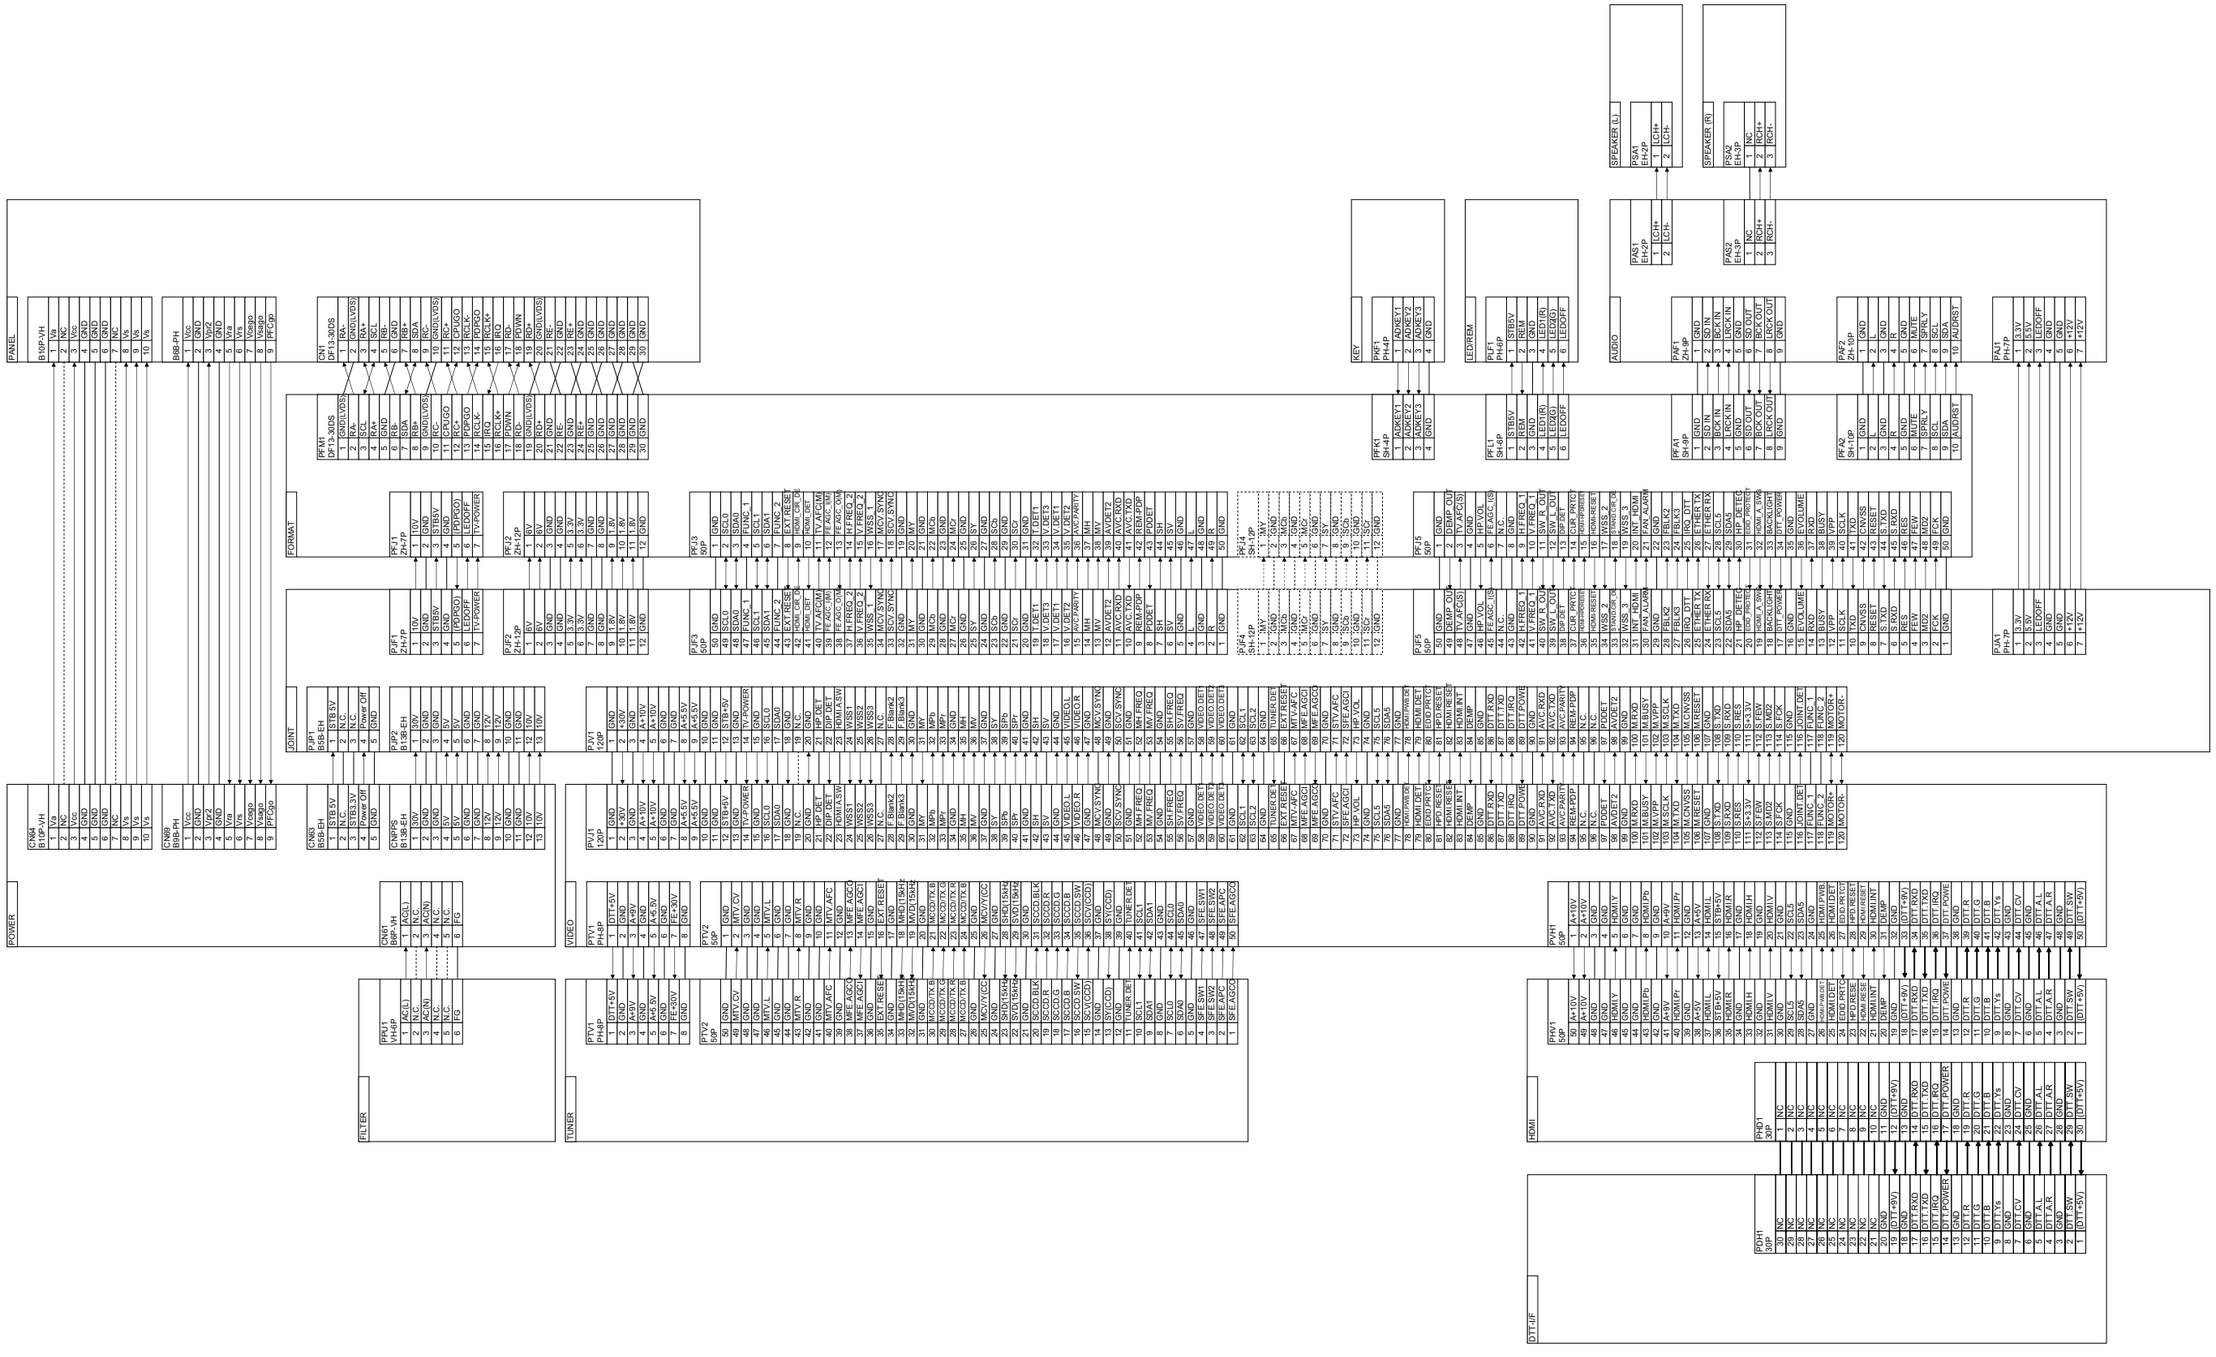
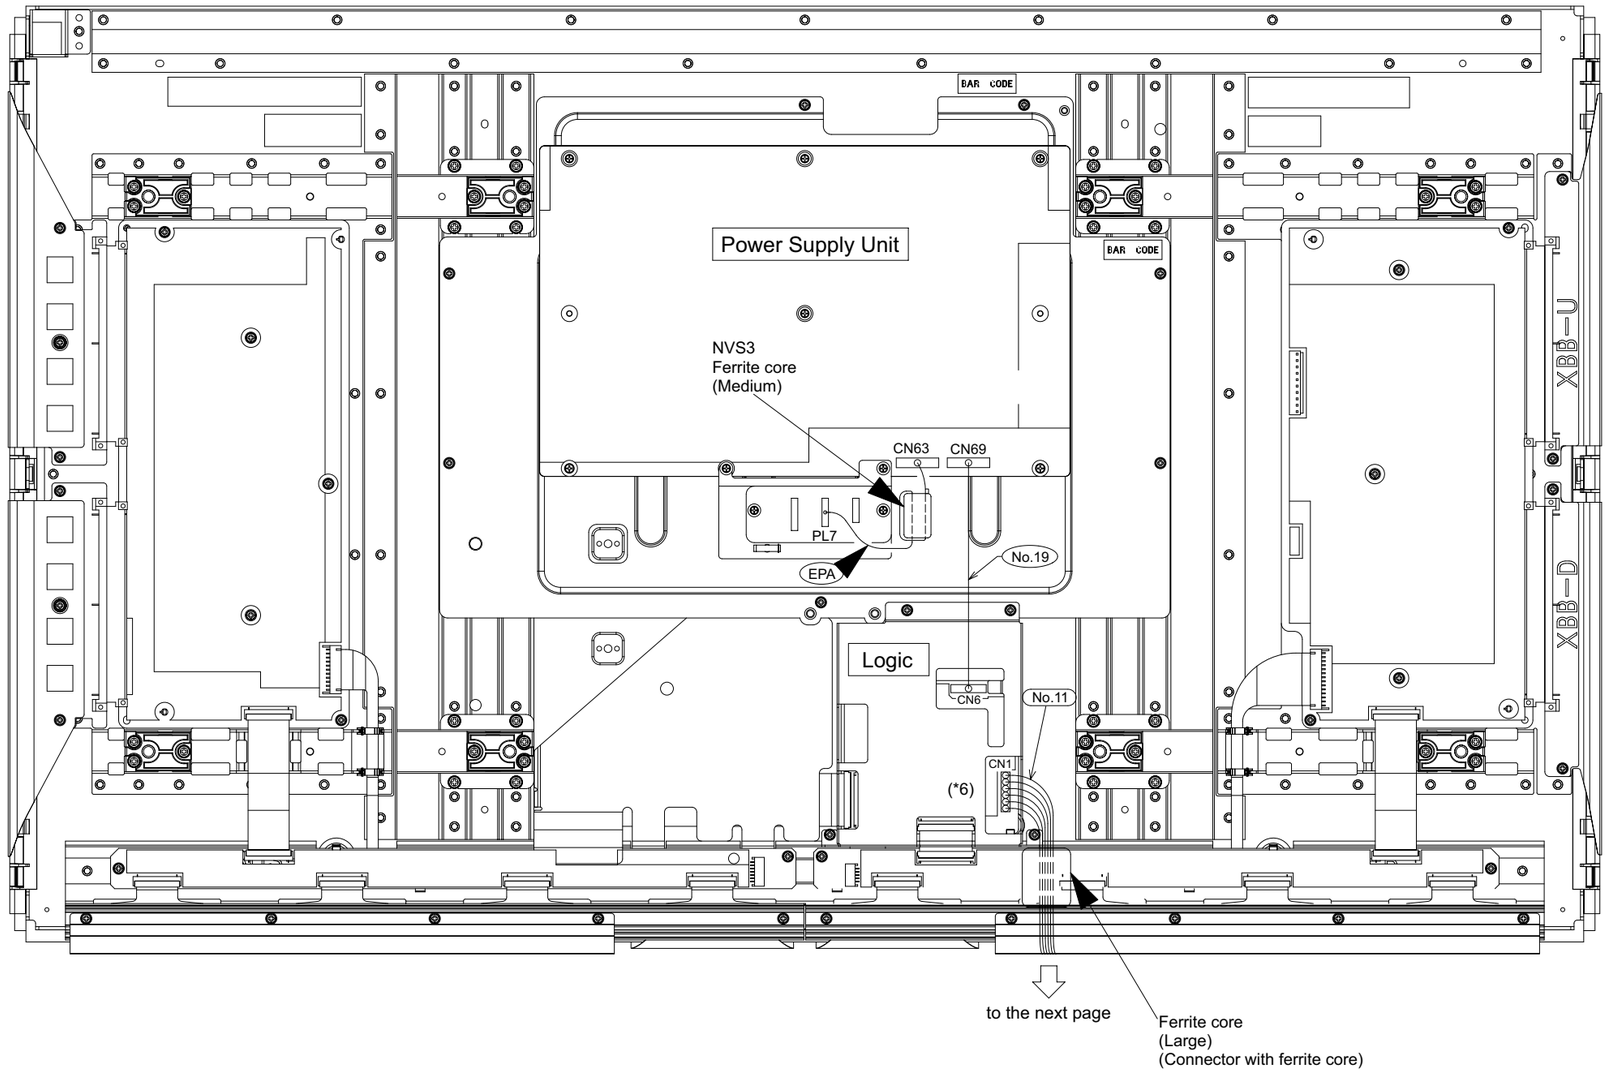
12. Connection diagram



13. Wiring diagram

wiring diagram for 42PD7500 1/3



Specification

1.This drawing shows the wiring diagram.Connection and wire styling in this model are in the figure.
2.This drawing shows the rear view of the set.
3.Insert the connector with the lock mechanizm until being firmly locked and the other connectors to the base part of post.
4.Refer to Table 1 as for the connector.
5.Regarding the mounting lug terminal cable (E903) with screws in detail, refer to the Final drawings(UQ3525).
6.In figure,as for the parts (*2) of the lead holder,the wire must be inserted inside of it surely. The connector with the lock mechanism must be lock firmly.
7.Lock the hook of the core surely until it sounds click when you close the ferrite core.

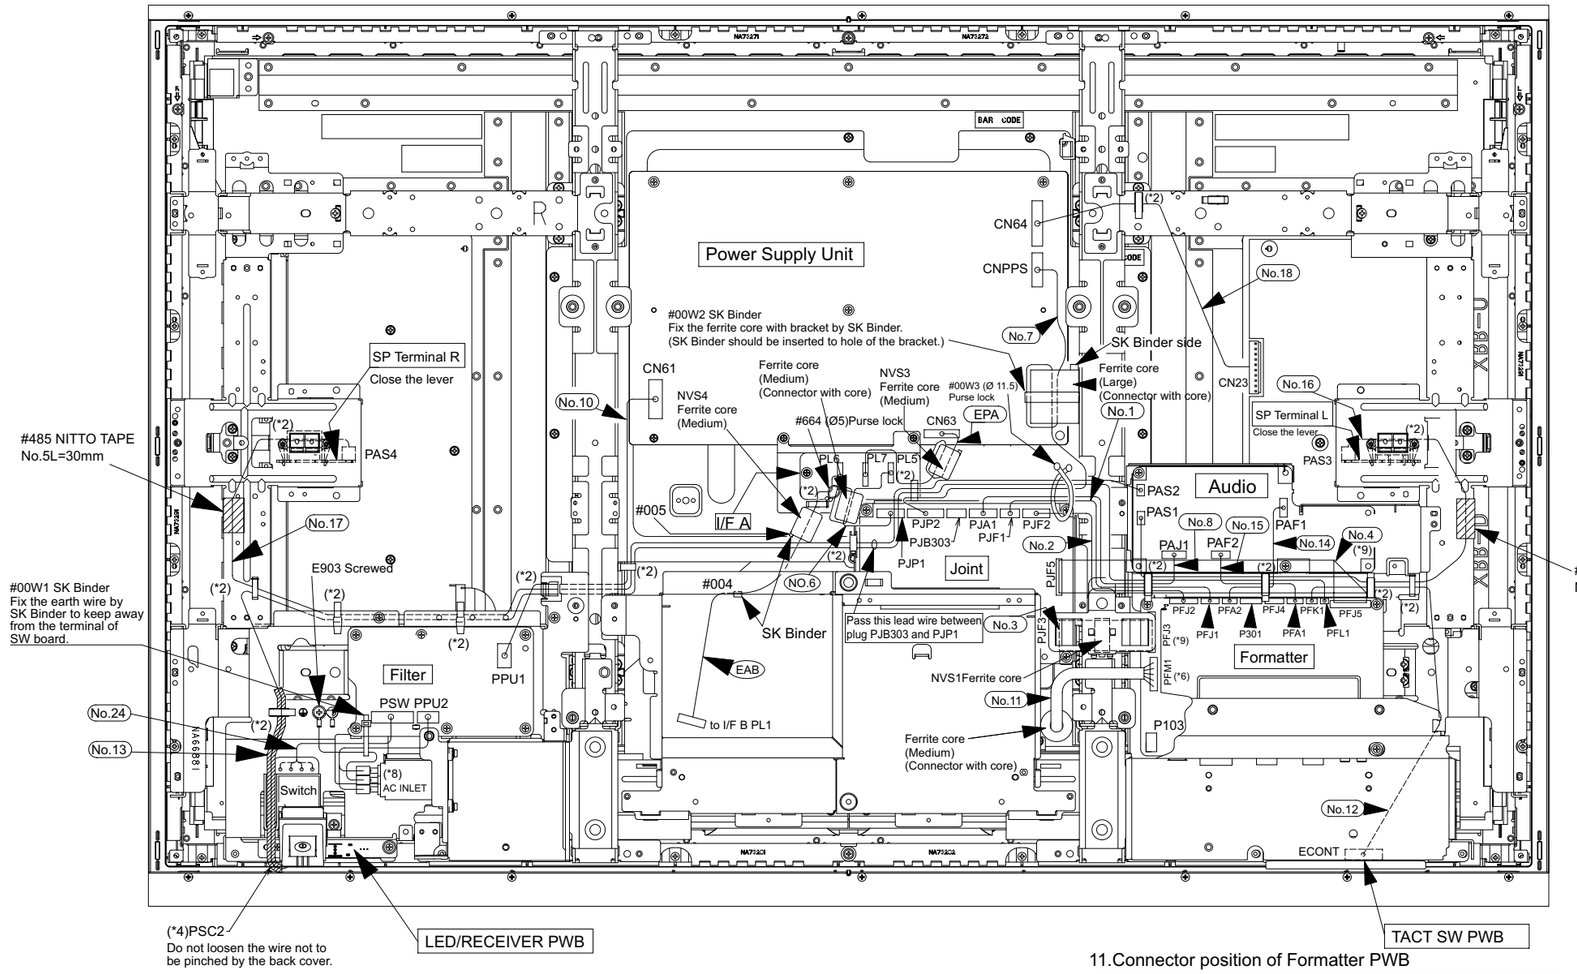
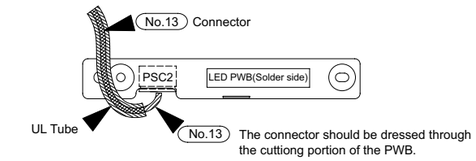
wiring diagram for 42PD7500 2/3

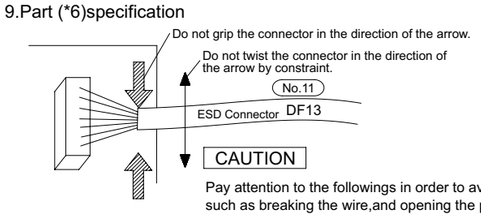


Specification

8.Part (*4) specification



9.Part (*6)specification



Do not grip the connector in the direction of the arrow.
Do not twist the connector in the direction of
the arrow by constraint.
No.11
ESD Connector DF13
CAUTION

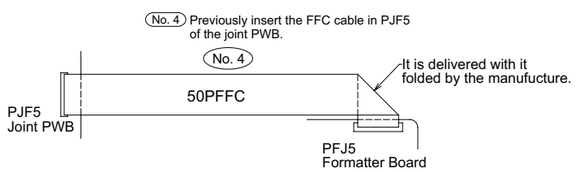
Pay attention to the followings in order to avoid defects, such as breaking the wire,and opening the pin contact part.

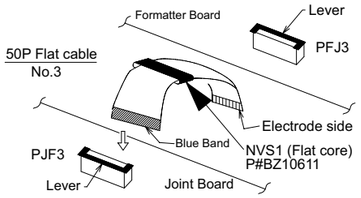
(1)Do not grip the wire in the direction of the arrow around the connector.
(It is because the stress focuses on the wire at both ends of connectors.)

(2)Do not twist the wire in the direction of the arrow by constraint when detach the connector.
(It is because the stress focuses on the wire at both ends of connectors.)

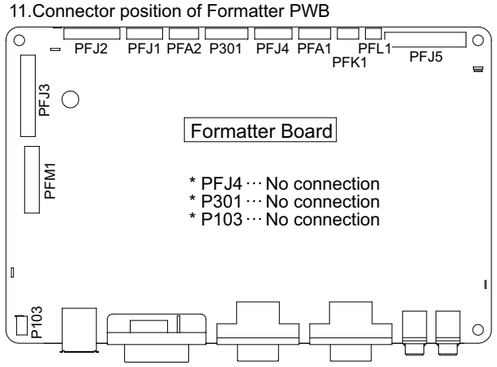
12.(*9) Specification

No. 3,4 Insert the Flat cable as shown on the drawing below, and press the stopper lock it surely.
Refer the Final ass'y drawing about the detail of the assemble.

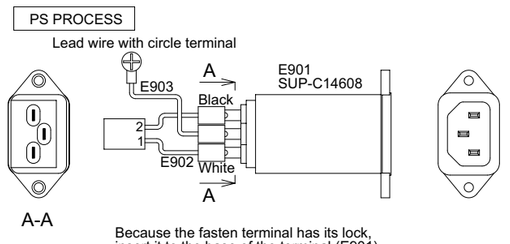




11.Connector position of Formatter PWB



10.Part (*8) specification.
The following is the connector connection to AC inlet.



Because the fasten terminal has its lock, insert it to the base of the terminal (E901), Release the lock while detaching the terminal. (While pushing the button to detach.)
